

General Programming Standards and Guidelines Code Review Checklist

| | | | |
|----------------------------|-----------------------------|------------|---|
| Project Name | Class Attendance Mobile App | Project ID | |
| Reviewer's Name | Ronnel Roi B. Austria | Sprint No. | 3 |
| Review Date | 03/09/2018 | | |
| File Name (Source Code) | ic_note_add_black_24dp.xml | | |

This checklist is to be used to assess source code during a peer review. Items which represent the code being reviewed should be checked off.

Place a check mark if the code complies with the criteria. If not, place comments at the remarks column.

1. License

| Criteria | Comply | | Remarks |
|--|--------|----|---------|
| | Yes | No | |
| License exists at the top of the code | ✓ | | |
| License contains the name of the author | ✓ | | |
| License contains the following: "This is a course requirement for CS 192 Software Engineering II under the supervision of Asst. Prof. Ma. Rowena C. Solamo of the Department of Computer Science, College of Engineering, University of the Philippines, Diliman for the AY 2015-2016". | ✓ | | |

2. Code History

| Criteria | Comply | | Remarks |
|--|--------|----|---------|
| | Yes | No | |
| Code History appears after the license of the source code. | ✓ | | |
| Code History has been updated accordingly based on name of programmer, change date and change description. | ✓ | | |

3. Internal Documentation

| Criteria | Comply | | Remarks |
|--|--------|----|--|
| | Yes | No | |
| A comment block exists after the Code History containing the following information: file creation date, development group, client group and a brief statement of the purpose of the software in the file. Each variable would have a corresponding descriptions variable_name; #description | ✓ | | |
| Each method in the file is preceded by a comment block which provides the following information: method name, routine's creation date, purpose of the routine, a list of the calling arguments (their types and what they do), a list of required files and/or database tables, and return value. | | | No methods in XML files. |
| Indentations are 5 spaces. TABS ARE NOT USED. | | ✓ | XML files |
| Inline comments are found at the top of the statement using '/*' and '*/'. | ✓ | | <!--comment--> are used instead in XML files |
| Bracketing of block statements follows the following format: if () { statements; } | | | no block comments in XML |
| Exceptions are being handled appropriately. | | | no exception handling |
| Meaningful variable names are used. | | | no variables |
| Variable are initialized prior to use. | | | no variables |
| Program statements are limited to one per line. | ✓ | | |
| Parenthesis are used to remove operator precedence ambiguity and improve code readability. | | | no operators |
| Meaningful error messages are used. | | | no error handling |

Design Principles (Modularity, Cohesion, Coupling). Place a check mark if the method complies with Coupling and Cohesion. If not, leave it blank.

| List of Method Signature | Modularity | | Remarks |
|--------------------------|------------|----------|---------|
| | Coupling | Cohesion | |
| | | | |
| | | | |
